Justice, 2016

Family Day Activity 2

(Dancing Miracle and Family Support Group, DMFAG)

Drug abuse is a medical problem as well as a social problem. Individual drug abuse is not only detrimental to individual health, but also causes many social problems (such as drug addiction triggering theft, robbery, smuggling and other criminal acts and so on). Many researches show that because of drug abuse and addiction, including genetic, physiological, psychological, social and economic factors, prevention and treatment of drug abuse and addiction and therefore need all-round integration, and the need to support the high level of cooperation and the relevant units. In addition to correctional problems, drug addicts are also faced with the impact of drug addiction and AIDS, while those in prison are subject to correction within the institution. Coupled with the public's strange vision, its helpless, hesitate, stumbling, and even anger, resentment of the state of mind, can be imagined.

In the consideration of the universal value of the dignity of life, the survival of harmonious coexistence, so the AIDS recipients in the positive motivation model and cognitive behavior of social psychological adjustment groups to enhance the ability to change motivation and social adaptation to enhance. We look forward to preventing future recidivism and reducing the incidence of infection. Our community should provide psychosocial support and substantial assistance to addicts and strengthen personal and support systems in order to maintain social safety and well-being.

This group project provide psychosocial support and practical assistance to prison drug users and AIDS inmates through the support of their specialists in order to reduce the harm caused by family members' imprisonment or treatment, to avoid dissolution and fragmentation of families, to strengthen personal and family support systems, and to maintain personal, family and social safety and well-being. For the following

purposes:

1. The use of psychological drama and dream analysis group counseling mode, with a view to enhance self-worth and positive cognition.
2. To assist members to learn positive thinking.
3. To strengthen members of the social psychological adjustment.
4. Strengthen the member self-care function.
5. Promote positive change motivations, remove negative labels to achieve positive development, and enhance self-confidence.
6. To improve communication and interpersonal skills to enhance support network relationships.
7. To enhance family support and communication skills.
